STROKE REHAB INTENSITY

Guiding questions to determine if your activity is included in Rehabilitation Intensity (RI) measurement:

1. Was I assessing, monitoring, guiding or treating the patient face-to-face?
2. Was my activity with the patient one-on-one*?
3. Was the patient actively engaged in the activity throughout the session?
4. Were the therapy activities helping the patient achieve his/her goal(s) and maximize his/her recovery?

If the answer to all questions is YES, include the activity in RI measurement.

If the answer to any question is NO, do not include the activity in RI measurement.

*with the exception of co-treatment/collaborative treatment

STROKE REHAB INTENSITY

STROKE REHAB INTENSITY

Definition: "The amount of time the patient spends in individual, goal-directed therapy, focused on physical, functional, cognitive, perceptual, communicative and social goals to maximize the patient's recovery, over a seven day/week period. It is time that a **patient** is engaged in active face-to-face treatment, which is monitored or guided by a therapist."

*The rehabilitation intensity definition was developed and approved by the Ontario Stroke Network Stroke Reference Group in 2012. This definition was later revised by the Ontario Regional Stroke Networks' Rehabilitation Coordinator Group in 2018.
