Making Seating A Success

John is a stroke survivor. About twenty five percent of Long Term Care residents have had a stroke.

- 1 **Head** is tilted
- 2 **Shoulder & Back** are tilted to the side
- 3 **Arm** is not supported
- 4 **Hip** is tucked under & slipped forward
- 5 **Feet** are not flat on floor

If John is not sitting properly, he may have problems with:

- eating, swallowing and talking
- dressing
- moving his body and wheelchair
- pain

Help John Without Hurting Yourself

While helping John, ensure that your knees are bent and your back is straight

DO NOT level John's hips by trying to lift them with your hands

DO NOT place just the heel of John's foot under his knee

DO NOT pull John's stroke arm to his lap

DO NOT pull up underneath John's armpits to take the weight off his hips

DO NOT lift John's hips to the back of the chair

DO make hips **level** by **drawing** the tucked hip out towards you, ensuring your knees are bent to protect your back

DO ensure that the **ball** of John's foot is directly under his knee

DO gently place John's stroke hand on his lap

DO guide John's shoulders forward to shift the weight off his hips

DO gently **slide** John's hips back into the chair by placing your knees against his, and carefully guide them backwards

Successful Seating!

- 1 **Head** is straight
- 2 **Shoulders & Back** are straight & supported
- 3 **Affected Arm** is secure with support of some kind (armrest, pillow or tray)
- 4 **Hips** are level & well back in chair
- 5 **Full foot** is flat on the floor

John can now more easily:

- eat, swallow & talk
- dress
- move his body & wheelchair
- be pain free & comfortable
